Input and output conveyors installed in series and spaced apart from each other for carrying material to be processed in a working direction, each of said input and output conveyors including

Art Unit: 3724

an endless belt having an non-skid upper surface adapted to carry said material and a lower opposing surface provided thereon with a guiding strip extending longitudinally of said endless belt; and

a pair of input-side and output-side pulleys having horizontal axes of rotation around which said endless belt is trained with said non-skid upper surface facing outwardly and said guiding strip extending in a plane substantially parallel with the working direction, each of said pulleys having a groove extending continuously circumferentially around said pulley and in said plane for engaging said strip, thereby preventing transverse displacements of said endless belt with respect to the working direction;

a processing unit disposed between said input and output conveyors for processing said material;

wherein said output-side pulley of said input conveyor and said input-side pulley of said output conveyor are driven by a single power unit to rotate at substantially the same speed; and

wherein said input-side pulley of said input conveyor and said output-side pulley of said output conveyor are passively driven by said output-side pulley of said input conveyor and said input-side pulley of said output conveyor, respectively, via said endless belts of said input and output conveyors, respectively.

Art Unit: 3724

- Add new claim 34 as follows:

Claim 34 (new) A processing apparatus, comprising:

Input and output conveyors installed in series and spaced apart from each other for carrying material to be processed in a working direction, each of said input and output conveyors including

an endless belt having an non-skid upper surface adapted to carry said material and a lower opposing surface provided thereon with a guiding strip extending longitudinally of said endless belt; and

a pair of input-side and output-side pulleys having horizontal axes of rotation around which said endless belt is trained with said non-skid upper surface facing outwardly and said guiding strip extending in a plane substantially parallel with the working direction, each of said pulleys having a groove extending continuously circumferentially around said pulley and in said plane for engaging said strip, thereby preventing transverse displacements of said endless belt with respect to the working direction;

a processing unit disposed between said input and output conveyors for processing said material;

wherein said strip has two side faces and a top face all extending longitudinally of said endless belt, said side faces tapering away from said opposing surface and ending at said top face;

Art Unit: 3724.

wherein said strip is provided with a plurality of V-shaped notches distributed longitudinally of said endless belt and extending from said top face toward, without contacting with, said opposing surface.
